AI usage policy

Business: Example Electrical Ltd Effective from: 20 November 2026 Responsible: Owner or managing director

Purpose and scope

This policy governs whether, under which conditions and for which purposes AI tools are used for work in this business. The business is the deployer of the tools used; the individual acts on its behalf. It applies to all employees and, as far as agreed by contract, to freelancers.

§ 1 Permitted tools and access

Only AI tools listed in the business's tool register as "approved" may be used for work. The register is kept by Office management. Use takes place through the access provided by the business.

Private accounts are not permitted for work tasks.

Business accounts carry no personal names; a functional email address of the business is used. The business accounts are managed by Office management.

§ 2 Permitted and prohibited uses

AI tools are used in this business for the following tasks: drafts of quotes and offers, summaries of documents, translations and wording help in customer correspondence.

They are not used for final decisions about persons: selection, assessment and termination are not based on an AI result.

§ 3 Prohibited inputs

The following is never entered into an AI tool, regardless of the access used: data about customers, staff and applicants by which a person can be identified; access data, passwords, keys and access codes; calculations, prices, contracts, customer lists and other information the business keeps confidential; health data; documents of third parties handed over in confidence; calculation sheets per job; access codes to customer sites.

In case of doubt nothing is entered; Office management is asked first.

§ 4 Handling unavoidable personal data

If a task cannot avoid personal data, the text is drafted with placeholders and the details are inserted afterwards outside the tool (for example: complaint letters are drafted with placeholders; office management inserts the details). Removing names and addresses is not enough where the context brings the person back.

§ 5 Review before use

Every result of an AI tool is read and checked by the person using it before it is used. At least figures, names, deadlines and references are checked, and in this business also standard and norm numbers.

§ 6 Release of documents leaving the business

Documents that were produced or edited with an AI tool and leave the business are released by Office management; in their absence by the owner.

§ 7 Labelling

Whether and how it is disclosed that content was generated or altered with AI is decided by Owner or managing director using the labelling checklist of the business. It concerns AI systems that talk directly to people; images, audio and video that show things that exist; and texts published on matters of public interest. Internal drafts and individual correspondence that a person checks and sends are not labelled.

§ 8 Reporting incidents

Anyone who notices that something confidential was entered into an AI tool by mistake or that a faulty result has left the business reports it immediately to Office management (in person or by phone, same day). The report itself has no consequences for the person reporting.

§ 9 Responsibility in case of doubt

Anyone unsure whether a task, an input or a tool is permitted asks Office management (in person or by phone) before entering anything.

Announcement, review, signature

This policy is handed to every person it applies to; each person confirms receipt and reading, and the confirmation is recorded in the briefing overview.

The policy is reviewed when a tool is added or changed, when a provider changes its terms, when the legal situation changes, and when practice deviates from the rule; in any case after 12 months.

The policy and the other evidence are kept at: Shared drive, folder "AI policy".

Place, date, signature of the management
